Moulding Selection Guide

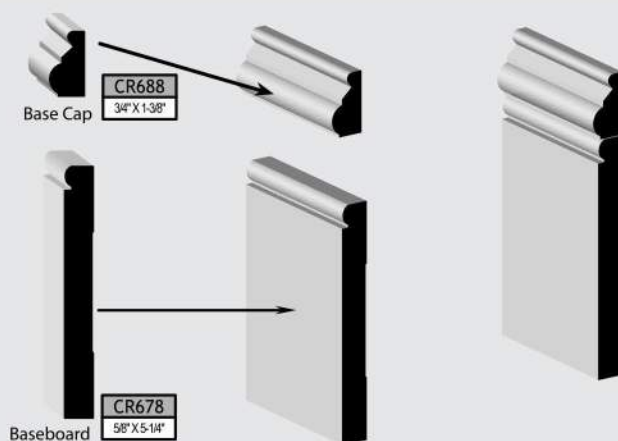

SERVING ALL YOUR MILLWORK NEEDS AT AFFORDABLE PRICES

Build-ups and Combinations

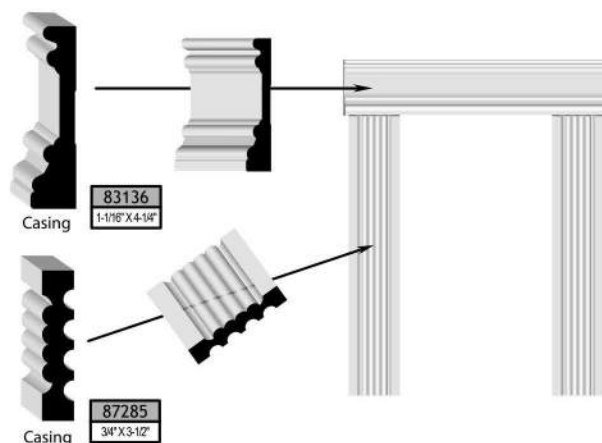

Baseboard

A baseboard runs along the length of a wall on the floor to conceal carpet, hardwood or other flooring gaps or imperfections. In the past, before vacuum cleaners and other modern cleaning devices made their appearance baseboards served to protect against wet mops sloshing against the walls and damaging the plaster or drywall. Baseboard combinations are often one of the easiest fixes to add a dramatically different ambience to any room with the least amount of effort.

Casings & headers

Casings usually surround door and window openings and create a statement about the room's character. Individual casing styles range from a contemporary style which emphasizes clean austere lines to a classic Victorian with ornate curves and profiles. By combining different types of casings you can develop unique blends of build up combinations. The only limitation is your imagination.

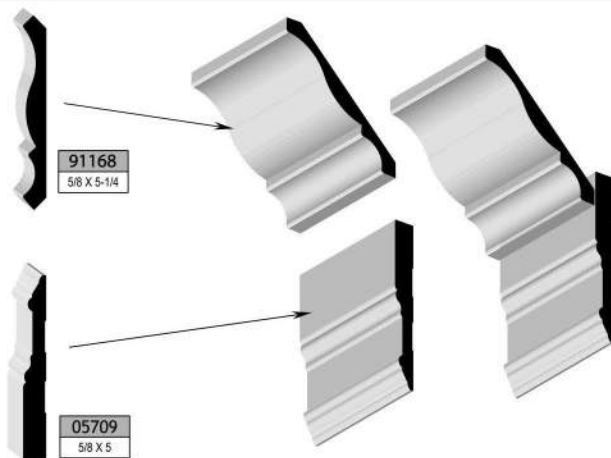

Chair rail

Chair Rails were originally designed to act as a protective barrier against chairs being pushed back against the walls in dining rooms, kitchens, or game rooms. Nowadays, the chair rail serves a more decorative purpose rather than a practical function. There are a variety of stock chair rail profiles available from Alexandria Moulding but we encourage you to experiment with combining other diverse simple moulding profiles to develop your own build ups with your own personal style.

Crown

Imagine your living room enriched with the classic look of wainscoting or an elegant dining room trimmed with unique style of raised-panels. You can easily customize and add charm to a space to reflect your personality by installing wall and ceiling trim mouldings. Capture an era, a style, a whim and create decorative elements to your home. The possibilities are endless...

SPECIES
